DMT 8/1/14

Warden,

A review was conducted from August 2013 through July 2014 regarding a case that involved either Sexual Abuse or Sexual Harassment among the staff and detainee population.

There were only two (2) cases reported both of which were "unfounded" after further review and investigation by outside agencies (USMS/FBI). Refer to attached survey and investigative reports for further details.

Based on my review, there is no trend on lack of staff oversight regarding our facilities duties and due diligence to all applicable PREA Standards that are of concern. To be noted, this will be the first year of statistical compilation for comparison reviews. There are no corrective actions which are warranted for this annual review.

I can report this with our commitment of on-going PREA training for all staff, contractors and volunteers on sexual abuse prevention, detection and response policies. A thorough and comprehensive review was conducted of the facility's internal structure for any potential "Blind Spots" or video/camera surveillance issues or concerns (report previously forwarded to your office). Our dedicated staff is committed to providing a safe, secure and humane environment for all detainees that are housed here.

If at any time, any of the enclosed reports are requested and we are required to produce, necessary "Re-Dacted" steps will be taken to ensure that any victim's identities will be protected or that any other information to be released would pose a clear and specific threat to the safety and security of the facility.
